

*Allegato I- Pollini di piante nettarifere e non nettarifere (Immagini tratte da: <http://ponetweb.ages.at/pls/pollen>)*

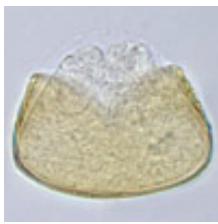

Alcuni pollini di piante nettarifere...

*Foeniculum vulgare*  
(Apiaceae)

*Hedera helix*  
(Araliaceae)

*Asphodelus albus*  
(Asphodelaceae)

*Echium vulgare*  
(Boraginaceae)

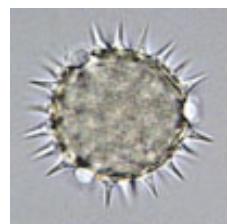

*Myosotis arvensis*  
(Boraginaceae)

*Abelia grandiflora*  
(Caprifoliaceae)

*Taraxacum officinale*  
(Compositae)

*Helianthus annuus*  
(Compositae)

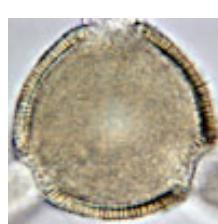

*Carduus nutans*  
(Compositae)

*Centaurea scabiosa*  
(Compositae)

*Brassica napus*  
(Cruciferae)

*Scabiosa columbaria*  
(Dipsacaceae)

*Erica arborea*  
Ericaceae

*Rhododendron hirsutum*  
Ericaceae

*Melilotus alba*  
(Fabaceae)

*Robinia pseudoacacia*  
(Fabaceae)

*Medicago sativa*  
(Fabaceae)

*Trifolium repens*  
(Fabaceae)

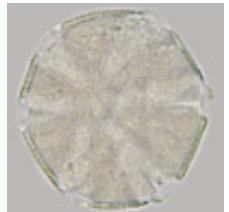

*Castanea sativa*  
(Fagaceae)

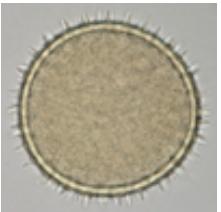

*Lavandula angustifolia*  
(Lamiaceae)

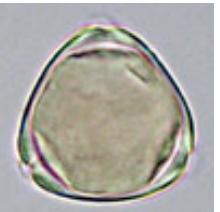

*Rosmarinus officinalis*  
(Lamiaceae)

*Melissa officinalis*  
(Lamiaceae)

*Malva sylvestris*  
(Malvaceae)

*Eucalyptus globulus*  
(Myrtaceae)

*Ligustrum vulgare*  
(Oleaceae)

*Malus domestica*  
(Rosaceae)

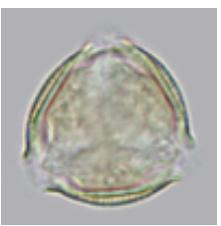

*Prunus avium*  
(Rosaceae)

*Citrus aurantium*  
(Rutaceae)

*Salix caprea*  
(Salicaceae)

*Ailanthus altissima*  
(Simaroubaceae)

*Tilia platyphyllos*  
(Tiliaceae)

... e di piante non nettarifere

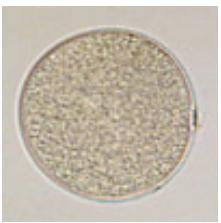

*Olea europaea*  
(Oleaceae)

*Pinus nigra*  
(Pinaceae)

*Plantago lanceolata*  
(Plantaginaceae)

*Zea mays*  
(Poaceae)

## omogeneizzare il campione

pesare 10.0 g di miele

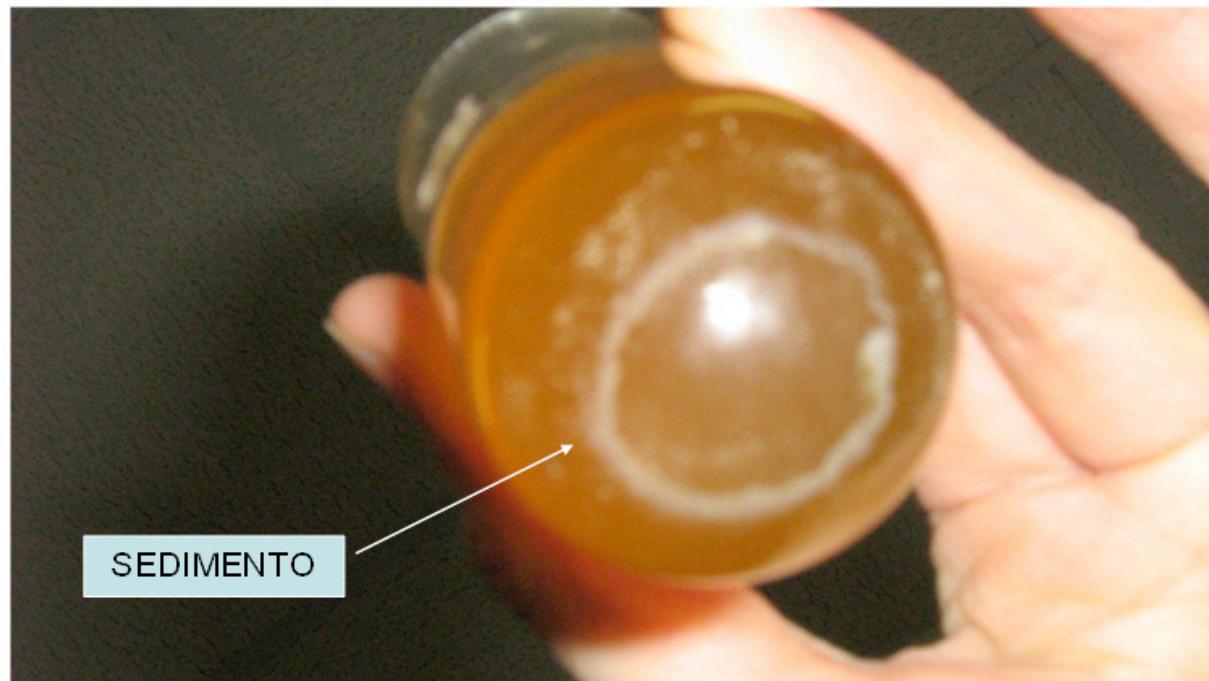

diluire con 20 mL di acqua distillata

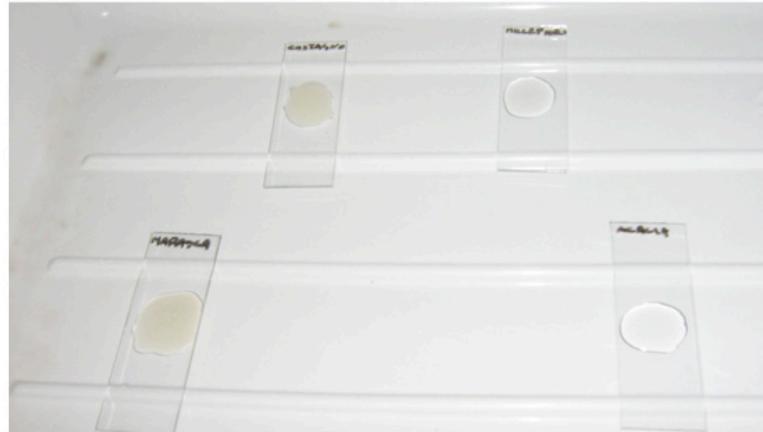

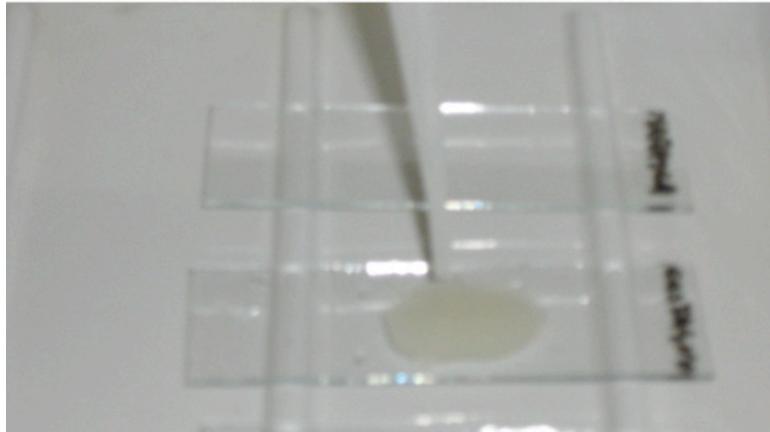

centrifugare per 10 min a 2800 rpm

eliminare il surnatante e mantenere il sedimento, poi ridiluire con 10 mL di acqua distillata e centrifugare per 5 min a 2800 rpm

distribuire il sedimento sul vetrino portaoggetti

lasciar asciugare e sigillare con un vetrino coprioggetti  
su cui è stata posta una goccia di gelatina glicerinata
